Carmen DeNavas-Walt prepared the income section of this report under the direction of **Edward J. Welniak Jr.**, Chief of the Income Surveys Branch. **Bernadette D. Proctor** prepared the poverty section and **Cheryl Hill Lee** prepared the health insurance coverage section, both under the direction of **Sharon Stern**, Chief of the Poverty and Health Statistics Branch. **Charles T. Nelson**, Assistant Division Chief for Income, Poverty, and Health Statistics, Housing and Household Economic Statistics Division, provided overall direction.

Adelle D. Berlinger, George M. Mitcham, Tim J. Marshall, Robert E. Rothhaas, and Gregory D. Weyland, Demographic Surveys Division, processed the Current Population Survey 2005 Annual Social and Economic Supplement file. **Caroline S. Carbaugh**, Chief of the Survey Processing Branch, **Stacy J. Lyons, Mary Thrift Bush, Kirk E. Davis, Jaime L. Hasiuk, and Thy K. Le** programmed and produced the detailed and publication tables.

Rebecca A. Olson, Jana Shepherd, and Jeffrey Stratton, under the supervision of **David V. Hornick** of the Demographic Statistical Methods Division, conducted sample review.

Bonnie S. Tarsia, Michelle L. Wiland, and Tim J. Marshall, Demographic Surveys Division, and **Andrew M. Stevenson**, Technologies Management Office, prepared and programmed the computer-assisted interviewing instrument used to conduct the Annual Social and Economic Supplement.

Additional people within the U.S. Census Bureau also made significant contributions to the preparation of this report. **Marjorie Hanson, David Waddington, and Len Norry** reviewed the contents. **Ruth Davis, Jessica Hutchins, Ann Margaret Jensen, Tracy E. Roberts, and Seraphina Sok** provided statistical assistance. **Doris Sansbury** provided clerical assistance.

Census Bureau field representatives and telephone interviewers collected the data. Without their dedication, the preparation of this report or any report from the Current Population Survey would be impossible.

Jamie Peters, Jan Sweeney, Helen M. Curtis, Theodora Forgione, and Mary Stinson, of the Administrative and Customer Services Division, **Walter C. Odom**, Chief, provided publications and printing management, graphics design and composition, and editorial review for print and electronic media. General direction and production management were provided by **Susan L. Rappa**, Chief, Publications Services Branch.

Income, Poverty, and Health Insurance Coverage in the United States: 2004

INTRODUCTION

This report presents data on income, poverty, and health insurance coverage in the United States based on information collected in the 2005 and earlier Annual Social and Economic Supplements (ASEC) to the Current Population Survey (CPS) conducted by the U.S. Census Bureau.

Real median household income showed no change between 2003 and 2004.¹ Both the number of people in poverty and the poverty rate increased between 2003 and 2004. The number of people without health insurance coverage, as well as the number of people with health insurance coverage increased

¹ All income values are adjusted to reflect 2004 dollars. "Real" refers to comparisons of income after adjusting for inflation. The adjustment is based on percentage changes in prices between earlier years and 2004 and is computed by dividing the annual average Consumer Price Index for 2004 by the annual average for earlier years. The CPI-U values for 1947 to 2004 are available in Appendix A. Inflation between 2003 and 2004 was 2.7 percent.

between 2003 and 2004, while the percentages with and without health insurance coverage showed no change between 2003 and 2004. These results were not uniform across demographic groups. For example, Blacks and Hispanics experienced no change in poverty, and Asians had an increase in health insurance coverage.²

This report has three main sections— income, poverty, and health insurance coverage. Each one presents estimates by characteristics such as

² Federal surveys now give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group such as Asian may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). The body of this report (text, figures, and text tables) shows data using the first approach (race alone). The appendix tables show data using both approaches. Use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches.

Unless footnoted to the contrary, all comparative statements regarding race in the text

race, Hispanic origin, nativity, and region. Other topics include earnings of full-time, year-round workers; poverty among families; and health insurance coverage of children. This report does not include data by metropolitan area status due to the transition from a 1990-based sample design to a Census 2000-based sample design. The 2005 ASEC sample is a mixture of both sample designs, which used different definitions of metropolitan areas. The report concludes with a section

(which are based on the race-alone concept) are also true in terms of statistical significance for the race-alone-or-in-combination concept.

In this report, the term "non-Hispanic White" refers to people who are not Hispanic and who reported White and no other race. The Census Bureau uses non-Hispanic Whites as the comparison group for other race groups and Hispanics.

Because Hispanics may be any race, data in this report for Hispanics overlap with data for racial groups. Being Hispanic was reported by 12.1 percent of White householders who reported only one race, 2.9 percent of Black householders who reported only one race, 27.7 percent of American Indian and Alaska Native householders who reported only one race, and 9.5 percent of Native Hawaiian and Other Pacific Islander householders who reported only one race.

Source of Estimates and Statistical Accuracy

The data in this report are from the Annual Social and Economic Supplement (ASEC) to the 2005 Current Population Survey (CPS). The population represented (the population universe) is the civilian noninstitutionalized population living in the United States. Members of the Armed Forces living off post or with their families on post are included if at least one civilian adult lives in the household. Most of the data from the CPS ASEC were collected in March (with some data collected in February and April), and the data were controlled to independent population estimates for March 2005.

The estimates in this report (which may be shown in text, figures, and tables) are based on responses from a sample of the population and may differ from actual values because of sampling variability or other factors. As a result, apparent differences between the estimates for two or more groups may not be statistically significant. All comparative statements have undergone statistical testing and are significant at the 90-percent confidence level unless otherwise noted. For further information about the source and accuracy of the estimates, go to <www.census.gov/hhes/www/p60_229sa.pdf>.

discussing income, poverty, and health insurance coverage for states using 2- and 3-year averages.

The income and poverty estimates shown in this report are based solely on money income before taxes and do not include the value of noncash benefits such as food stamps, Medicare, Medicaid, public housing, and employer-provided fringe benefits. Later this year, the Census Bureau will release detailed tables on alternative measures of income and poverty, which include taxes and selected noncash benefits.

The CPS is one of the longest running surveys conducted by the Census Bureau. The CPS ASEC asks detailed questions about income from over 50 sources. The key purpose of the CPS ASEC is to provide timely and detailed estimates of income, poverty, and health insurance coverage and to measure change for those estimates at both the national and state level.

The Census Bureau also reports on income and poverty based on the American Community Survey (ACS). The ACS is part of the 2010 Decennial Census Program and will replace the long form sample. The ACS offers broad, comprehensive information on social, economic, and housing data and is designed to provide this information at many levels of geography, and most importantly, for local communities. The ACS collects basic information about income using eight questions and does not collect information about health insurance.

Since the CPS ASEC produces the most complete and thorough estimates of income and poverty, the Census Bureau recommends that people use this data source for national estimates. While both the CPS ASEC and the ACS offer income and poverty estimates at

Dynamics of Economic Well-Being

With monthly data on the experiences of individuals, families, or households over the course of the panel with regard to labor force participation, income, and health insurance coverage, SIPP provides a unique opportunity to learn about the dynamic nature of these experiences. Thus, it enables us to measure the economic mobility of people in the U.S. economy.* For example, previous SIPP reports have shown that:

- Of households in the lowest income quintile in 1996, 38 percent were in a higher quintile in 1999; of those originally in the highest income quintile, 34 percent were in a lower quintile 3 years later.
- About one-half (49.5 percent) of people who were in poverty in 1996 were not in poverty in 1999.
- For people who became uninsured, the average length of time without health insurance over the 1996–1999 period was 5.6 months.

More information about movements such as these is available in a series of reports called the *Dynamics of Economic Well-Being*. Topics covered include household income, poverty, health insurance coverage, labor force turnover, unemployment, and program participation. For further information about SIPP, and copies of these reports, see www.sipp.census.gov/sipp/.

* The 2001 SIPP panel collected data from February 2001 through January 2004. The 2004 SIPP panel began collecting data in February 2004 and plans are to finish interviewing in January of 2008.

the state level, it is important not to draw any conclusions from comparisons across surveys; for example, it is inappropriate to compare a state estimate of poverty in the CPS ASEC to a different state in the ACS. The ACS is the only direct survey source of data for local areas—metropolitan areas, counties, places, and, in the future, neighborhoods.³

The CPS ASEC provides reliable estimates of the net change from one year to the next in the overall distribution of economic characteristics of the population, but it does not show how those characteristics change for

³ For guidance about when to use income and poverty estimates from each survey, see “Guidance on Differences in Income and Poverty Estimates from Different Sources” at www.census.gov/hhes/www/poverty/newguidance.html.

the same person, family, or household. Longitudinal measures of income, poverty, and health insurance coverage that are based on following the same people over time are available from the Survey of Income and Program Participation (SIPP). Estimates derived from SIPP data answer questions such as:

- What percentage of households move up or down the income distribution over time?
- How many people remain in poverty over time?
- How long do people without health insurance tend to remain uninsured?

The text box “Dynamics of Economic Well-Being” provides more information.

INCOME IN THE UNITED STATES

Highlights

- Median household income was \$44,389 in 2004, unchanged from 2003 in real terms (Figure 1 and Table 1). Median household income was also unchanged in real terms between 2002 and 2003. Compared with 1967, the first year for which household income statistics are available, real median household income was up 30 percent.
- Real median household income was unchanged between 2003 and 2004 for all race groups shown in Table 1 and for households with

Hispanic householders (who can be any race).^{4,5}

- The most commonly used measures of household income inequality, the Gini index and the share of aggregate income received by quintiles, remained unchanged

⁴ The householder is the person (or one of the people) in whose name the home is owned or rented and the person to whom the relationship of other household members is recorded. If the home is owned jointly by a married couple, either the husband or the wife may be listed as the householder. Since only one person in each household is designated as the householder, the number of householders is equal to the number of households. This report uses the characteristics of the householder to describe the household.

⁵ Data users should exercise caution when interpreting aggregate results for the Hispanic population or for race groups because these

between 2003 and 2004 (Table 1).⁶

- Earnings represent the largest component of income, but earnings trends and income trends are not perfectly correlated. While median household income in 2004 was not

populations consist of many distinct groups that differ in socioeconomic characteristics, culture, and recency of immigration. In addition, the CPS does not use separate population controls for weighting the Asian sample to national totals. Data were first collected for Hispanics in 1972 and for Asians and Pacific Islanders in 1987. For further information, see <www.bls.census.gov/cps/ads/adsmain.htm>.

⁶ See the article by Paul Allison, "Measures of Inequality," *American Sociological Review*, 43, December 1977, pp. 865–880, for an explanation of inequality measures.

Figure 1.
Real Median Household Income: 1967 to 2004

Note: The data points are placed at the midpoints of the respective years. Median household income data are not available before 1967.

Hispanic origin (any race)	40,425	13,855	304	41,839	14,106	296	1.8	2.29

- Represents zero or rounds to zero.

* Statistically different from zero at the 90-percent confidence level.

¹ A 90-percent confidence interval is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate. For more information, see "Standard Errors and Their Use" at <www.census.gov/hhes/www/p60_229sa.pdf>.

² Federal surveys now give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group such as Asian may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows data using the first approach (race alone). The use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White **and** American Indian and Alaska Native or Asian **and** Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.

Source: U.S. Census Bureau, Current Population Survey, 2004 and 2005 Annual Social and Economic Supplements.

statistically different from 2003, the real median earnings of both men and women who worked full-time, year-round declined between 2003 and 2004 (Table 1 and Figure 2). The median earnings of men declined by 2.3 percent, from \$41,761 to \$40,798 and the median earnings of women declined by 1.0 percent, from \$31,550 to \$31,223. Reflecting the larger fall in the earnings of men, the female-to-male earnings ratio increased from 0.76 to 0.77 between 2003 and 2004 (Figure 2).

Race and Hispanic Origin

Real median household income remained unchanged between 2003

and 2004 for each of the race groups shown in Table 1 and for households with Hispanic householders (who can be any race). Black households had the lowest median income. Their 2004 median income was \$30,134, which was 62 percent of the median for non-Hispanic White households (\$48,977).⁷ Asian households had the highest median income among the race groups. Their 2004 median income was \$57,518, about 117 percent of the median for non-Hispanic White households. Median income for Hispanic

households was \$34,241 in 2004, which was 70 percent of the median for non-Hispanic White households.

Table 2 shows income data for the American Indian and Alaska Native population and the Native Hawaiian and Other Pacific Islander population.⁸ Because of the relatively small populations of these racial groups, the sampling variability of their income data is larger than for the other racial groups

⁸ Data users should exercise caution when interpreting aggregate results for the American Indian and Alaska Native (AIAN) and Native Hawaiian and Other Pacific Islander (Pacific Islander) populations because these populations consist of groups that differ in economic characteristics. In addition, the CPS does not use separate population controls for weighting the AIAN and Pacific Islander samples to national totals.

⁷ The distribution of household income is influenced by many factors, such as the number of earners and household size. The Census Bureau uses non-Hispanic Whites as the comparison group for other race and Hispanic groups.

Table 2.
Income of Households by Race and Hispanic Origin Using 2- and 3-Year-Average Medians: 2002 to 2004

(Income in 2004 dollars)

Race ¹ and Hispanic origin	3-year average ² 2002–2004 (dollars)		2-year average ³ (dollars)				Change in real median income (2003–2004 average less 2002–2003 average)	
	Median income	90-percent confidence interval ⁴ (±)	2003–2004		2002–2003		Dollars	Percentage change
			Median income	90-percent confidence interval ⁴ (±)	Median income	90-percent confidence interval ⁴ (±)		
All races	44,473	208	44,436	263	44,514	230	–79	–0.2
White	46,971	214	46,777	248	47,108	254	*–331	*–0.7
White, not Hispanic	49,101	253	49,019	312	49,162	292	–143	–0.3

- Represents zero or rounds to zero.

* Statistically different from zero at the 90-percent confidence level.

¹ Federal surveys now give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group such as Asian may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows data using the first approach (race alone). The use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White **and** American Indian and Alaska Native or Asian **and** Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.

² The 3-year-average median is the sum of three inflation-adjusted single-year medians divided by 3.

³ The 2-year-average median is the sum of two inflation-adjusted single-year medians divided by 2.

⁴ A 90-percent confidence interval is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate. For more information, see "Standard Errors and Their Use" at <www.census.gov/hhes/www/p60_229sa.pdf>.

Source: U.S. Census Bureau, Current Population Survey, 2003 to 2005 Annual Social and Economic Supplements.

and may cause single-year estimates to fluctuate more widely. To reduce the chances of misinterpreting changes in income or comparisons of income with other groups, the Census Bureau uses 2-year-average medians for measuring changes in the income of the American Indian and Alaska Native and the Native Hawaiian and Other Pacific Islander populations over time, and 3-year-average medians when comparing the income of these groups with other racial groups also shown in Table 2.⁹

⁹ The 2-year-average median is the sum of two inflation-adjusted (real) single-year medians, divided by 2. The 3-year-average median is the sum of three inflation-adjusted (real) single-year medians, divided by 3.

Comparison of 2-year moving averages (2002–2003 and 2003–2004) shows that the real median income for American Indian and Alaska Native households was statistically unchanged over that period. The same was true for the Native Hawaiian and Other Pacific Islander households.

The 3-year-average (2002–2004) median income for American Indian and Alaska Native households was:

- Higher than the median for Black households.
- Not statistically different from the median for Hispanic households.
- Lower than the medians for non-Hispanic White households, Asian

households, and Native Hawaiian and Other Pacific Islander households.

The 3-year-average (2002–2004) median income for Native Hawaiian and Other Pacific Islander households was:

- Higher than the medians for Black households, Hispanic households, and American Indian and Alaska Native households.
- Not statistically different from the median for non-Hispanic White households.
- Lower than the median for Asian households.

Figure 2.
Female-to-Male Earnings Ratio and Median Earnings of Full-Time, Year-Round Workers 15 Years and Older by Sex: 1960 to 2004

Note: The data points are placed at the midpoints of the respective years. Data on earnings of full-time year-round workers are not readily available before 1960.

Source: U.S. Census Bureau, Current Population Survey, 1961 to 2005 Annual Social and Economic Supplements.

Nativity

Real median household income remained unchanged for native as well as foreign-born households between 2003 and 2004 (Table 1).¹⁰ Native households had a median income in 2004 of \$45,319, not statistically different from the median of households maintained by a person who was a naturalized citizen, \$46,233. The

¹⁰ Native households are those in which the householder was born in the United States, Puerto Rico, or certain U.S. Island Areas (Guam, the Northern Mariana Islands, or the Virgin Islands of the United States) or was born in a foreign country but had at least one parent who was a U.S. citizen. All other households are considered foreign born regardless of the date of entry into the United States or citizenship status. The CPS does not interview households in Puerto Rico. Of all households, 87.2 percent were native households, 5.9 percent were households with foreign-born householders who were naturalized citizens, and 6.8 percent were households with householders who were not citizens.

incomes of both of these groups were higher than the incomes of foreign-born households (\$39,421) and households maintained by a foreign-born householder who was not a citizen of the United States (\$34,497).

Region

Real median income of households did not change between 2003 and 2004 in 3 of the 4 regions, while income in the Midwest declined 2.8 percent to \$44,657 (Table 1). In 2004, households in the Northeast (\$47,994) and the West (\$47,680) had the highest median incomes; households in the South had the lowest median income (\$40,773).¹¹

¹¹ The difference between the median household incomes in the Northeast and the West was not statistically significant.

Income Inequality

The Gini index, one of the most widely used inequality measures, indicated no change in household income inequality between 2003 and 2004. The 2004 Gini index (0.466) was higher than in 1995, although the individual annual changes since then were not statistically significant. (Appendix Table A-3 lists historical inequality measures.)¹²

The share of aggregate income received by quintiles, another widely used inequality measure, also

¹² Direct comparisons with years earlier than 1993 are not recommended because of substantial methodological changes in the 1994 ASEC. In that year, the Census Bureau introduced computer-assisted interviewing, increased income reporting limits, and introduced new 1990 decennial census-based population controls.

remained unchanged between 2003 and 2004. The share of the aggregate household income received by the lowest household income quintile was 3.4 percent in 2004; the second quintile received 8.7 percent, the third quintile 14.7 percent, the fourth quintile 23.2 percent, and the fifth quintile 50.1 percent.

Work Experience and Earnings

The number of working men aged 15 and older increased by 949,000 between 2003 and 2004 to 81.5 million. An estimated 73.7 percent worked full-time, year-round, a

higher percentage than in 2003 (73.0 percent).¹³ The number of women workers in the same age group was 72.0 million, an increase of 548,000 from 2003. About 58.8 percent worked full-time, year-round, not statistically different from the 2003 percentage.

The real median earnings of both men and women who worked full-time, year-round declined between 2003 and 2004 (Table 1 and Figure 2).

¹³ A full-time, year-round worker is a person who worked full-time (35 or more hours per week) and 50 or more weeks during the previous calendar year.

The median earnings of men declined 2.3 percent to \$40,798. The median earnings of women declined by 1.0 percent to \$31,223. This is the second consecutive year that women experienced a decline in earnings. Before 2003, women had not experienced an annual decline in median earnings since 1995. Over the same period, the pattern for men has been mixed. Reflecting the larger fall in the earnings of men, the female-to-male earnings ratio increased from 0.76 to 0.77 between 2003 and 2004, not statistically different from the all-time high of 0.76 first reached in 2001 (Figure 2).

POVERTY IN THE UNITED STATES¹⁴

Highlights

- The official poverty rate in 2004 was 12.7 percent, up from 12.5 percent in 2003.
- In 2004, 37.0 million people were in poverty, up 1.1 million from 2003.
- Poverty rates remained unchanged for Blacks (24.7 percent) and Hispanics (21.9 percent), rose for non-Hispanic Whites (8.6 percent in 2004, up from 8.2 percent in 2003), and decreased for Asians (9.8 percent in 2004, down from 11.8 percent in 2003).

¹⁴ The Office of Management and Budget (OMB) determined the official definition of poverty in Statistical Policy Directive 14. Using this definition, the Census Bureau measures who is in poverty, as described in Appendix B.

- The poverty rate in 2004 (12.7 percent) was 9.7 percentage points lower than in 1959, the first year for which poverty estimates are available (Figure 3). From the most recent low in 2000, both the number and rate have risen for four consecutive years, from 31.6 million and 11.3 percent in 2000 to 37.0 million and 12.7 percent in 2004, respectively.
- For children under 18 years old, both the 2004 poverty rate (17.8 percent) and the number in poverty (13.0 million) remained unchanged from 2003. The poverty rate for children under 18 remained higher than that of 18-to-64-year-olds (11.3 percent) and that of people aged 65 and over (9.8 percent).
- Both the poverty rate and number in poverty increased for people 18

to 64 years old (11.3 percent and 20.5 million in 2004, up from 10.8 percent and 19.4 million in 2003).

- The poverty rate decreased for seniors aged 65 and older, 9.8 percent in 2004, down from 10.2 percent in 2003, while the number in poverty in 2004 (3.5 million) was unchanged.

Race and Hispanic Origin

Both the poverty rate and the number in poverty for non-Hispanic Whites increased from 2003 to 2004—8.6 percent and 16.9 million in 2004, up from 8.2 percent and 15.9 million in 2003 (Table 3). The poverty rate for non-Hispanic Whites was lower than for other racial groups; they accounted for 45.6 percent of the people in poverty, compared with 67.1 percent of the total population.

Figure 3.
Number in Poverty and Poverty Rate: 1959 to 2004

Note: The data points are placed at the midpoints of the respective years.

- Represents zero or rounds to zero.

* Statistically different from zero at the 90-percent confidence level.

¹ A 90-percent confidence interval is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate. For more information, see "Standard Errors and Their Use" at <www.census.gov/hhes/www/p60_229sa.pdf>.

² Details may not sum to totals because of rounding.

³ Federal surveys now give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group such as Asian may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows data using the first approach (race alone). The use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White and American Indian and Alaska Native or Asian and Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.

Source: U.S. Census Bureau, Current Population Survey, 2004 and 2005 Annual Social and Economic Supplements.

For Blacks, neither the poverty rate (24.7 percent) nor the number in poverty (9.0 million) changed between 2003 and 2004 (Table 3). Among Asians, 9.8 percent were in poverty in 2004, lower than the 11.8 percent in 2003. The number in poverty also decreased—to 1.2 million in 2004 from 1.4 million in 2003. Among Hispanics, neither the poverty rate nor the number in poverty changed between 2003 and 2004, at 21.9 percent and 9.1 million in 2004.¹⁵

Table 4 displays 3-year averages of the poverty rate and the number in poverty for 2002–2004 for American Indians and Alaska Natives, Native Hawaiians and Other Pacific Islanders, and other groups. The 3-year-average poverty rate for American Indians and Alaska Natives (24.3 percent) was not statistically different from the rate for Blacks and Hispanics.¹⁶ It was higher than the rates for other groups. The 3-year-average poverty rate for Native Hawaiians and Other Pacific Islanders (13.2 percent) was lower than the rate for Blacks, American Indians and Alaska Natives, and Hispanics; higher than the rate for non-Hispanic Whites; and not statistically different from the rate for Asians.

Looking at differences in 2-year averages between 2002–2003 and 2003–2004, the poverty rate did not change for American Indians and Alaska Natives or Native Hawaiians and Other Pacific Islanders.

¹⁵ The number in poverty for Blacks was not statistically different from that of Hispanics.

¹⁶ The rate for the American Indian and Alaska Native alone or in-combination population was statistically lower than that for the American Indian and Alaska Native alone, Black alone, and Hispanic populations. It was higher than the rates for other groups.

Age

In 2004, both the poverty rate and the number in poverty for people 18 to 64 increased—11.3 percent and 20.5 million, up from 10.8 percent and 19.4 million in 2003. The poverty rate for people 65 years and older decreased to 9.8 percent in 2004, down from 10.2 percent in 2003, while their number in poverty remained unchanged at 3.5 million in 2004 (Table 3 and Figure 4).

In 2004, children under 18 showed no change in the poverty rate or the number in poverty (17.8 percent and 13.0 million). The poverty rate for children was higher than the rates for both people 18 to 64 years old and 65 and older, 11.3 percent and 9.8 percent, respectively (Table 3). In addition, children represented 35.2 percent of the people in poverty, compared with 25.2 percent of the total population.

In 2004, the poverty rate and the number in poverty for related children under 6 living in families were 19.9 percent and 4.7 million, both unchanged from 2003. Of related children under 6 living in families with female householders with no husband present, 52.6 percent were in poverty, about five times the rate of their counterparts in married-couple families (10.1 percent).

Nativity

Of all people in the poverty universe, 87.9 percent were natives, 4.6 percent were foreign-born naturalized citizens, and 7.4 percent were foreign-born noncitizens. The native population had increases in both their poverty rate (from 11.8 percent to 12.1 percent) and number in poverty (from 30.0 million to 31.0 million) between 2003 and 2004 (Table 3). In contrast, both the poverty rate and number in poverty for the foreign born were unchanged from 2003—17.1 percent and 6.0 million in 2004.

Of the foreign-born population, 38.4 percent were naturalized citizens; the rest were noncitizens. Their poverty rates in 2004 were 9.8 percent for foreign-born naturalized citizens and 21.6 percent for those who had not become citizens, both unchanged from 2003.

Region

The Midwest was the only region to show an increase in both the number in poverty and the poverty rate—7.5 million and 11.6 percent in 2004, up from 6.9 million and 10.7 percent in 2003. In 2004, the poverty rates for the Northeast (11.6 percent), South (14.1 percent), and West (12.6 percent) all were unchanged from 2003. The South continued to have the highest poverty rate (Table 3).

Families

The number of families in poverty increased to 7.9 million in 2004, up from 7.6 million in 2003, while their poverty rate remained unchanged at 10.2 percent in 2004 (Table 3).

The poverty rate and the number in poverty showed no change between 2003 and 2004 for the different types of families. In 2004, married-couple families (5.5 percent and 3.2 million), female-householder, no-husband-present families (28.4 percent and 4.0 million), and male-householder, no-wife-present families (13.5 percent and 658,000) all were unchanged from 2003.

DEPTH OF POVERTY MEASURES

While categorizing people as “in poverty” or “not in poverty” is one way to describe their economic situation, economic experiences usually cover a broader spectrum. Two “depth of poverty” measures are designed to more fully reflect the distribution of people’s economic well-being. The

Table 4.
Number in Poverty and Poverty Rates by Race and Hispanic Origin Using 2- and 3-Year Averages: 2002 to 2004

(Numbers in thousands)

- Represents zero or rounds to zero.

* Statistically different from zero at the 90-percent confidence level.

¹ Federal surveys now give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group such as Asian may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows data using the first approach (race alone). The use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White **and** American Indian and Alaska Native or Asian **and** Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.

² Details may not sum to totals because of rounding.

³ A 90-percent confidence interval is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate. For more information, see "Standard Errors and Their Use" at <www.census.gov/hhes/www/p60_229sa.pdf>.

ratio of income to poverty compares a family's income with its poverty threshold and expresses that comparison as a ratio. The income deficit (surplus) tells how many dollars a family's or unrelated individual's (people who do not live with relatives) income is below (above) its poverty threshold. These measures illustrate how the low-income population varies by level of poverty.

Ratio of Income to Poverty Level

Table 5 presents the number and percentage of people within three ranges of income-to-poverty ratios—those below 50 percent of poverty (“Under 0.50”), those at or above 50 percent but below 100 percent of poverty (“Between 0.50 to 1.00”), and those at or above their threshold but below 125 percent of poverty (“1.00 to 1.25”).

In 2004, the number of people with income below one-half of their poverty thresholds was 15.6 million, unchanged from 2003. They represented 5.4 percent of the total population and 42.3 percent of the poverty population, both rates unchanged from 2003 (Table 5).

For people in families with income of at least 50 percent but below 100 percent of their poverty thresholds, both the number and percentage increased from 20.6 million and 7.2 percent in 2003 to 21.4 million and 7.4 percent in 2004.

The number and percentage of people (unrelated individuals or people in families) with income at or above their threshold but below 125 percent of their threshold remained unchanged in 2004, at 12.7 million and 4.4 percent.

The demographic makeup of the population differs at varying degrees of poverty. For instance, in 2004, the 65-and-older population was more highly concentrated just above their poverty thresholds than below 50 percent of their thresholds. Among people aged 65 and older, 2.6 percent were below 50 percent of their poverty threshold, compared with 5.4 percent for all people, and 7.2 percent were above 50 percent and below 100 percent of their threshold, compared with 7.4 percent for all people.¹⁷ The proportion of people 65 and older who were at or above their poverty threshold but below 125 percent of poverty was 6.7 percent, compared with 4.4 percent for all people.

¹⁷ The percentage of people 65 and older who were between 50 and 100 percent of their poverty threshold was not statistically different from the percentage of all people between 50 and 100 percent of their poverty threshold.

Income Deficit

The income deficit for families in poverty (the difference in dollars between a family's income and its poverty threshold) averaged \$7,775 in 2004 (Table 6), unchanged in real terms from 2003.

The average income deficit was greater for families with a female householder with no husband present (\$8,394) than for married-couple families (\$7,254) and families with a male householder with no wife present (\$6,588). The income deficit per

capita for female-householder families (\$2,601) was higher than for married-couple families (\$1,977) and male-householder families (\$2,264). The income deficit per capita is computed by dividing the average deficit by the average number of people in that type of family. Because families with a female householder with no husband present were smaller than married-couple families, the greater per capita deficit for female-householder families reflects their smaller family size as well as their lower income.

For unrelated individuals in poverty, the average income deficit was \$5,259 in 2004; the \$4,971 deficit for women was lower than the \$5,634 deficit for men. Because unrelated individuals aged 65 and older have lower poverty thresholds, and because there were more female than male unrelated individuals aged 65 and older, the lower average deficit for women reflects differences in age, not just income.

HEALTH INSURANCE COVERAGE IN THE UNITED STATES¹⁸

Highlights

- The number of people with health insurance coverage increased by 2.0 million in 2004, to 245.3 million (84.3 percent of the population).
- In 2004, 45.8 million people were without health insurance coverage, up from 45.0 million people in 2003.
- There was no change in the percentage of people without health insurance coverage (15.7 percent) between 2003 and 2004.
- The historical record is marked by a 12-year period from 1987 to 1998 when the uninsured rate (12.9 percent in 1987) either increased or was unchanged from one year to the next (Figure 5).¹⁹ After peaking at 16.3 percent in 1998, the rate fell for two years in a row to 14.2 percent in 2000, and the rate increased for three years before stabilizing at 15.7 percent in 2004.²⁰
- The percentage of people covered by employment-based health insurance decreased to 59.8 percent in 2004, from 60.4 percent in 2003 (Figure 6).
- The percentage and number of people covered by government health insurance programs increased between 2003 and 2004, from 26.6 percent and 76.8 million to 27.2 percent and 79.1 million, driven by increases in the

¹⁸ For a brief description of how the Census Bureau collects and reports on health insurance, see the text box "What Is Health Insurance Coverage?" For a discussion of the quality of ASEC health insurance coverage estimates, see Appendix C.

¹⁹ The year 1987 is the first year for which comparable health insurance coverage statistics are available.

²⁰ The difference between the percentage uninsured in 1998 and 1997 was not statistically significant.

What Is Health Insurance Coverage?

The CPS ASEC asks about health insurance coverage in the previous calendar year. The questionnaire asks separate questions about the major types of health insurance and people who answer "no" to each of these questions are then asked to verify that they were, in fact, not covered by any type of health insurance. For the purpose of this report, the Census Bureau broadly classifies health insurance coverage as private or government coverage. Private health insurance is coverage by a plan provided through an employer or union or purchased by an individual from a private company. Government health insurance includes the federal programs Medicare, Medicaid, and military health care; the State Children's Health Insurance Program (SCHIP); and individual state health plans.* People were considered "insured" if they were covered by any type of health insurance for part or all of the previous year, and everyone else was considered uninsured.

Research shows health insurance coverage is underreported in the CPS ASEC for a variety of reasons. While annual retrospective questions appear to be less of a problem when collecting income data (possibly because the interview period is close to when people pay their taxes), it is probably less than ideal when asking about health insurance coverage. Some people, for example, may report their insurance coverage status at the time of their interview rather than their coverage status during the previous calendar year. Compared with other national surveys, the CPS ASEC estimate of the number of people without health insurance more closely approximates the number of people who were uninsured at a specific point in time during the year than the number of people uninsured for the entire year.

For more information on the quality of CPS ASEC health insurance estimates, see Appendix C, "Estimates of Health Insurance Coverage." For a comparison between health insurance coverage rates from the major federal surveys, see *How Many People Lack Health Insurance and For How Long?* (Congressional Budget Office, May 2003) and *People With Health Insurance: A Comparison of Estimates from Two Surveys* (Survey of Income and Program Participation Working Paper 243, June 2004).

* Types of insurance are not mutually exclusive and people may be covered by more than one during the year.

percentage and number of people covered by Medicaid, from 12.4 percent and 35.6 million to 12.9 percent and 37.5 million (Figure 6).

- The percentage and number of children (people under 18 years old) without health insurance in 2004 was 11.2 percent and 8.3 million, both unchanged from 2003 (Table 7).
- With a 2004 uninsured rate at 18.9 percent, children in poverty were more likely to be uninsured than all children (Figure 7).
- The uninsured rate and number of uninsured in 2004 was 11.3 percent and 22.0 million for non-Hispanic Whites, and 19.7 percent and 7.2 million for Blacks. The figures for both groups were unchanged from 2003. The

Figure 5.
Number Uninsured and Uninsured Rate: 1987 to 2004

Notes: Respondents were not asked detailed health insurance questions before the 1988 Current Population Survey. Implementation of Census 2000-based population controls occurred for the 2000 ASEC, which collected data for 1999. These estimates also reflect the results of follow-up verification questions which were asked of people who responded “no” to all questions about specific types of health insurance coverage in order to verify whether they were actually uninsured. This change increased the number and percentage of people covered by health insurance, bringing the CPS more in line with estimates from other national surveys.

The data points are placed at the midpoints of the respective years.

Source: U.S. Census Bureau, Current Population Survey, 1988 to 2005 Annual Social and Economic Supplements.

uninsured rate for Asians decreased from 18.8 percent to 16.8 percent (Table 7).

- The number of uninsured increased in 2004 for Hispanics (from 13.2 million in 2003 to 13.7 million); their uninsured rate was unchanged at 32.7 percent (Table 7).

Type of Coverage

Most people (59.8 percent) were covered by a health insurance plan related to employment for some or all of 2004. The proportion was lower than in 2003 (60.4 percent). This decline reflects the decrease in total private health insurance coverage, from 68.6 percent in 2003 to 68.1 percent in 2004 (Figure 6).

The percentage of people covered by health insurance provided by the government increased between 2003 and 2004 from 26.6 to 27.2 percent. Medicaid coverage rose by 0.5 percentage points to 12.9 percent in 2004, while the percentage of people covered by Medicare remained unchanged (13.7 percent). Among the entire population, 27.2 percent had government insurance, which includes Medicare, Medicaid, and military health care.

Race and Hispanic Origin

In 2004, the uninsured rates for Blacks (19.7 percent) and non-Hispanic Whites (11.3 percent) were unchanged from 2003 (Table 7).

The rate for Asians decreased to 16.8 percent in 2004 from 18.8 percent in 2003. Among Hispanics, the 2004 uninsured rate (32.7 percent) was unchanged from 2003, while the number of Hispanics without coverage increased from 13.2 million in 2003 to 13.7 million.

Table 8 displays 3-year averages of the uninsured rates for 2002–2004 for American Indians and Alaska Natives, Native Hawaiians and Other Pacific Islanders, and other groups. The 3-year-average uninsured rate for American Indians and Alaska Natives (29.0 percent) was higher than the rate for Native Hawaiians and Other Pacific Islanders (21.8 percent) and higher than those of other groups.

- Represents zero or rounds to zero.

* Statistically different from zero at the 90-percent confidence level.

¹ Details may not sum to totals because of rounding.

² A 90-percent confidence interval is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate. For more information, see "Standard Errors and Their Use" at <www.census.gov/hhes/www/p60_229sa.pdf>.

³ Federal surveys now give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group such as Asian may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This table shows data using the first approach (race alone). The use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White **and** American Indian and Alaska Native or Asian **and** Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.

Source: U.S. Census Bureau, Current Population Survey, 2004 and 2005 Annual Social and Economic Supplements.

Figure 6.
**Coverage by Type of Health Insurance:
 2003 and 2004**
 (Percent)

* Statistically different at the 90-percent confidence level.

¹ Military health care includes: CHAMPUS (Comprehensive Health and Medical Plan for Uniformed Services)/Tricare and CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs), as well as care provided by the Department of Veterans Affairs and the military.

Note: The estimates by type of coverage are not mutually exclusive; people can be covered by more than one type of health insurance during the year.

Source: U.S. Census Bureau, Current Population Survey, 2004 and 2005 Annual Social and Economic Supplements.

The 3-year-average uninsured rate for Native Hawaiians and Other Pacific Islanders (21.8 percent) was not statistically different from that of Blacks (19.8 percent) or Asians (18.0 percent). The 3-year average (2002–2004) shows that the uninsured rate of 32.6 percent for Hispanics was higher than the rate for the five race groups presented in Table 8.

Comparison of 2-year moving averages (2002–2003 and 2003–2004)

shows that the uninsured rates for Native Hawaiians and Other Pacific Islanders and for American Indians and Alaska Natives did not change.

Nativity

The uninsured rate for the native population increased to 13.3 percent in 2004, from 13.0 percent in 2003. The uninsured rate for the foreign-born population in 2004 (33.7 percent) was unchanged (Table 7). Among the foreign born, the uninsured rate for noncitizens decreased,

from 45.3 percent in 2003 to 44.1 percent in 2004, while the uninsured rate in 2004 for naturalized citizens (17.2 percent) was unchanged. The proportion of the foreign-born population without health insurance in 2004 (33.7 percent) was about two and one-half times that of the native population (13.3 percent) in 2004. Among the foreign born, noncitizens were more likely than naturalized citizens to lack coverage—44.1 percent compared with 17.2 percent, respectively.

Economic Status

The likelihood of being covered by health insurance rises with income. Among people in households with annual incomes of less than \$25,000 in 2004, 75.7 percent had health insurance; the level increased with income up to 91.6 percent for those in households with incomes of \$75,000 or more (Table 7).

Among 18-to-64-year-olds in 2004, full-time workers were more likely to be covered by health insurance (82.2 percent) than part-time workers (75.0 percent) or nonworkers (74.2 percent).²¹ The number and percentage of people with no health insurance increased among people who worked some time during the year, from 26.6 million and 18.6 percent in 2003 to 27.4 million and 19.0 percent in 2004. While the number of uninsured increased for both full-time workers (from 20.6 million to 21.1 million) and part-time workers (5.9 million to 6.3 million), the percentage uninsured increased from 23.8 percent to 25.0 percent for part-time workers and was unchanged for full-time workers.

²¹ Workers are classified as part-time if they worked fewer than 35 hours per week in the majority of the weeks they worked in 2004. The coverage rate for part-time workers is not statistically different from that of nonworkers.

Children's Health Insurance Coverage

The percentage and number of children (people under 18 years old) without health insurance in 2004 was 11.2 percent and 8.3 million, both unchanged from 2003 (Table 7). The likelihood of health insurance cover-

age varied among children by poverty status, age, race, and Hispanic origin. Children in poverty were more likely to be uninsured than the population of all children in 2004—18.9 percent compared with 11.2 percent (Figure 7).

Children 12 to 17 years old were more likely to be uninsured than

those under 12—12.5 percent compared with 10.5 percent. About 21.1 percent of Hispanic children did not have any health insurance in 2004, compared with 7.6 percent for non-Hispanic White children, 13.0 percent for Black children, and 9.4 percent for Asian children.

Region

The Midwest had the lowest uninsured rate in 2004 at 11.9 percent, followed by the Northeast (13.2 percent), the West (17.4 percent), and the South (18.3 percent).

STATE LEVEL DATA

Tables 9, 10, and 11 present data at the state level for income, poverty, and health insurance coverage, respectively, using 2- and 3-year averages. The Census Bureau recommends using 3-year averages to compare estimates across states and 2-year averages to evaluate changes in state estimates over time. Corresponding Figures D-1, D-2, and D-3 display 3-year averages and their associated 90-percent confidence intervals for the United States, each of the 50 states, and the District of Columbia. These ordered lists should not be regarded as a ranking.²²

²² The CPS ASEC is designed to collect statistically reliable estimates primarily at the national level and secondarily at the regional level. State estimates are considerably less reliable—that is, the sampling variability for state estimates is higher, and state estimates fluctuate more widely year-to-year than national estimates. To improve these estimates, the Census Bureau creates "Model-Based State Estimates" (see text box on page 28).

Figure 7.
Uninsured Children by Poverty Status, Age, and Race and Hispanic Origin: 2004

(Percent)

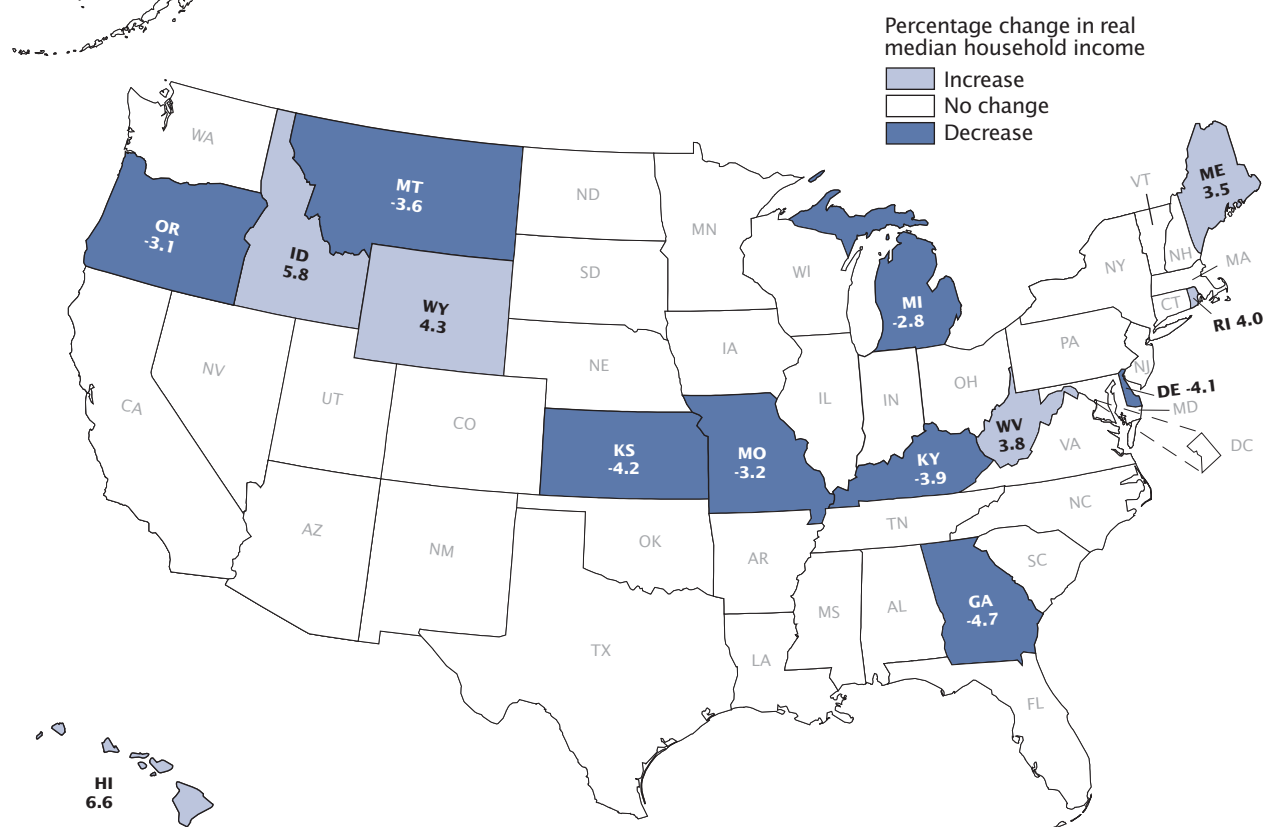

¹ Federal surveys now give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group such as Asian may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This figure shows data using the first approach (race alone). The use of the single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White *and* American Indian and Alaska Native or Asian *and* Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.

Note: For discussion of statistically significant differences between groups, see text.

Figure 8.
Percentage Change in 2-Year-Average Real Median Household Income by State: 2003-2004 Less 2002-2003

Source: U.S. Census Bureau, Current Population Survey, 2003 to 2005 Annual Social and Economic Supplements.

Income

Comparing 3-year-average medians for 2002–2004 shows that the median household income for New Hampshire (\$57,352)—not statistically different from the median incomes for New Jersey, Maryland, Connecticut, and Minnesota—was higher than incomes of the other 45 states and the District of Columbia (Table 9). Conversely, the median

household income for West Virginia (\$32,589)—not statistically different from the median incomes for Arkansas and Mississippi—was lower than the incomes of the other 47 states and the District of Columbia.

Real median household income rose for six states and declined for eight states, based on comparing the percentage change in 2-year-average real medians for 2003–2004 with those of

2002–2003 (Figure 8). Three states that experienced increases were in the West (Hawaii, Idaho, and Wyoming), two were in the Northeast (Maine and Rhode Island), and one was in the South (West Virginia). Three states that experienced declines were in the South (Delaware, Georgia, and Kentucky), three were in the Midwest (Kansas, Michigan, and Missouri), and two were in the West (Montana and Oregon).

- Represents zero or rounds to zero.

* Statistically different from zero at the 90-percent confidence level.

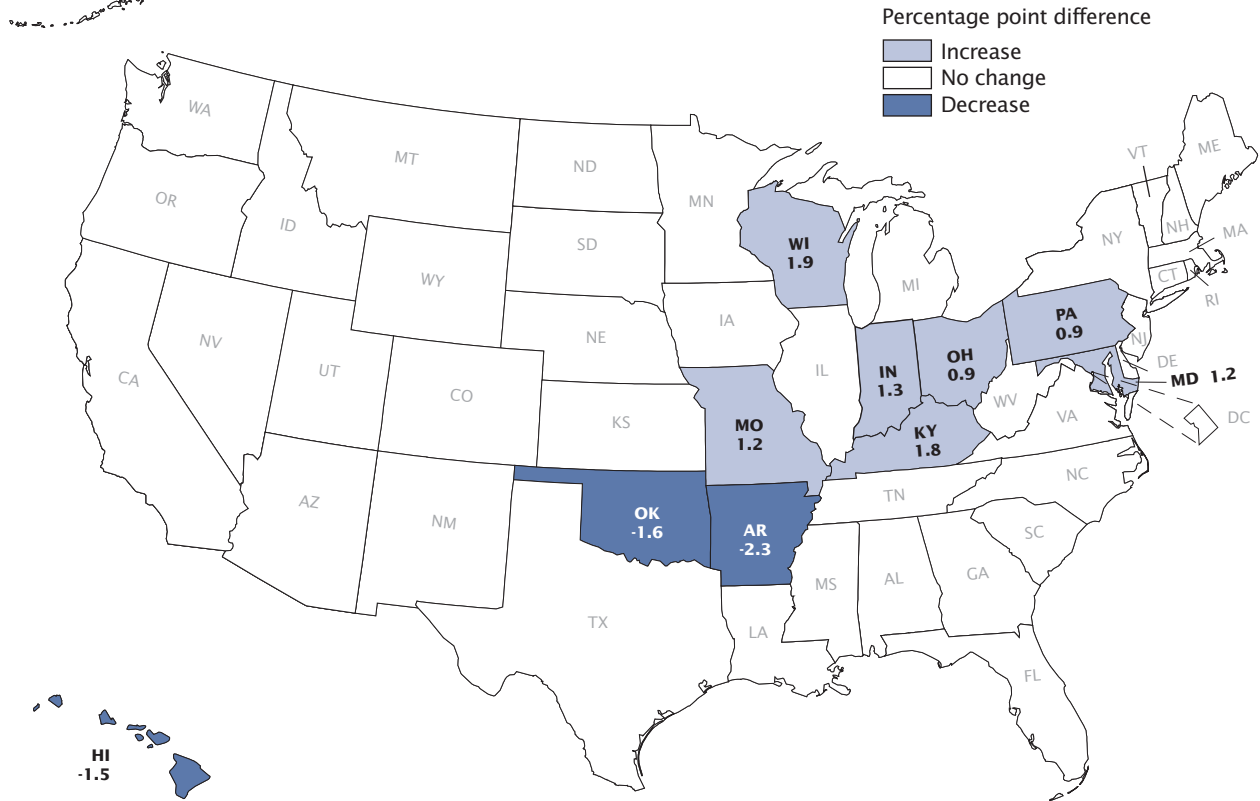

¹ The 3-year-average median is the sum of three inflation-adjusted single-year medians divided by 3.

² The 2-year-average median is the sum of two inflation-adjusted single-year medians divided by 2.

³ A 90-percent confidence interval is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate. For more information, see "Standard Errors and Their Use" at <www.census.gov/hhes/www/p60_229sa.pdf>.

Poverty

Comparing states using 3-year-average poverty rates for 2002–2004 shows that the poverty rate for Mississippi (17.7 percent)—not statistically different from the rates for Arkansas, Louisiana, New Mexico, Texas, West Virginia, and the District of Columbia—was higher than the rates of the other 44 states (Table 10). At the other end

of the distribution, the 3-year-average poverty rate for New Hampshire (5.7 percent)—not statistically different from the rate for Minnesota—was lower than those for the other 48 states and the District of Columbia.

Based on 2-year moving averages (2002–2003 and 2003–2004), Figure 9 shows that the poverty rate declined for three states and

increased for seven states. The poverty rate decreased in Arkansas, Hawaii, and Oklahoma. Four of the states that experienced increases were in the Midwest (Indiana, Missouri, Ohio, and Wisconsin), two were in the South (Kentucky and Maryland), and one was in the Northeast (Pennsylvania).

Health Insurance Coverage

Comparing states using 3-year-average uninsured rates for 2002–2004 shows that Texas (25.1 percent) had the highest proportion of uninsured, while Minnesota (8.5 percent) had the lowest (Table 11).

Comparisons of 2-year moving averages (2002–2003 and 2003–2004) show that the proportion of people without coverage fell in three states and rose in eight states (Figure 10). The uninsured rate decreased for Idaho, New York, and Wyoming. Five of the states that experienced

increases were in the South (Delaware, Florida, Oklahoma, South Carolina, and Tennessee), one was in the West (Montana), and two were in the Northeast (Massachusetts and New Hampshire).

Model-Based State Estimates

The Census Bureau also produces improved annual estimates (that is, estimates with lower standard errors than CPS ASEC estimates) of median household income and poverty for the states, as well as for counties and school districts, based on models using data from the CPS ASEC, the decennial census, administrative records, and personal income data published by the Bureau of Economic Analysis. The model-based estimates are more accurate than the CPS ASEC estimates, but less timely because of lags in the availability of administrative records. Estimates for 2002 are available on the Internet at <www.census.gov/hhes/www/saipe/index.html>. Estimates for 2003 will be available in Fall 2005.

The Census Bureau has undertaken a project to estimate health insurance coverage rates for counties. The Small Area Health Insurance Estimates (SAHIE) program released experimental estimates in July 2005 on the number of people without health insurance coverage for counties for people of all ages, and those under 18 years of age. Estimates for 2000 are available on the Internet at <www.census.gov/hhes/www/sahie/index.html>.

CPS DATA COLLECTION

The information in this report was collected in the 50 states and the District of Columbia and does not represent residents of Puerto Rico and outlying areas.²³ It is based on a sample of about 100,000 addresses. The estimates in this report are controlled to national population estimates by

²³ Outlying areas include American Samoa, Guam, the Northern Mariana Islands, and the Virgin Islands of the United States.

age, race, sex, and Hispanic origin, and to state population estimates by age. The population controls used to prepare estimates for 1999 to 2004 were based on the results from Census 2000 and are updated annually using administrative records such as birth and death certificates.

The CPS is a household survey primarily used to collect employment data. The sample universe for the basic CPS consists of the resident civilian noninstitutionalized population of the

United States. People in institutions, such as prisons, long-term care hospitals, and nursing homes, are therefore not eligible to be interviewed in the CPS. Students living in dormitories are only included in the estimates if information about them is reported in an interview at their parents' homes. The sample universe for the CPS ASEC is slightly larger than the basic CPS since it includes military personnel who live in a household with at least one other civilian adult, regardless of whether they live off post or on post. All other Armed Forces are excluded. For further documentation about the CPS ASEC, see <www.bls.census.gov/cps/ads/adsmain.htm>.

COMMENTS

The Census Bureau welcomes the comments and advice of data and report users. If you have suggestions or comments, please write to:

Additional Data and Contacts

Detailed tables, historical tables, press releases and briefings, and unpublished data are available electronically on the U.S. Census Bureau's Income, Poverty, and Health Insurance Web sites. The Web sites may be accessed through the Census Bureau's home page at <www.census.gov> or directly at <www.census.gov/hhes/www/income.html> for income data, <www.census.gov/hhes/www/poverty.html> for poverty data, and <www.census.gov/hhes/www/hlthins.html> for health insurance data. Microdata are available for downloading by clicking on "Data Tools" on

the Census Bureau's home page and then clicking the "DataFerret" link. Technical methods have been applied to CPS microdata to avoid disclosing the identities of individuals from whom data were collected.

For assistance with income, poverty, or health insurance data or questions about them, contact the Housing and Household Economic Statistics Division statistical information staff by telephone at 301-763-3242 or search your topic of interest using the Census Bureau's "Question and Answer Center" found at <<http://ask.census.gov>>.

APPENDIX A. ESTIMATES OF INCOME

How Income Is Measured

For each person in the sample 15 years and over, the Annual Social and Economic Supplement (ASEC) asks questions on the amount of money income received in the preceding calendar year from each of the following sources:

1. Earnings
2. Unemployment compensation
3. Workers' compensation
4. Social security
5. Supplemental security income
6. Public assistance
7. Veterans' payments
8. Survivor benefits
9. Disability benefits
10. Pension or retirement income
11. Interest
12. Dividends
13. Rents, royalties, and estates and trusts
14. Educational assistance
15. Alimony
16. Child support
17. Financial assistance from outside of the household
18. Other income

It should be noted that although the income statistics refer to receipts during the preceding calendar year, the demographic characteristics, such as age, labor force status, and household composition, are as of the survey date. The income of the household does not include amounts received by people who were members during all or part of the previous year if these people no longer resided in the household at the time of interview. The Current Population Survey (CPS) collects income data for people who are current residents but did not

Recessions

Peak month	Year	Trough month	Year

reside in the household during the previous year.

Data on income collected in the ASEC by the U.S. Census Bureau cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, social security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive noncash benefits, such as food stamps, health benefits, subsidized housing, and goods produced and consumed on the farm. In addition, money income does not reflect the fact that noncash benefits are also received by some nonfarm residents, which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. Data users should consider these elements when comparing income levels. Moreover, readers should be aware

that for many different reasons there is a tendency in household surveys for respondents to underreport their income. Based on an analysis of independently derived income estimates, the Census Bureau determined that respondents report income earned from wages or salaries much better than other sources of income, and that the reported wage and salary income is nearly equal to independent estimates of aggregate income.

Cost of Living Adjustment

In order to accurately assess changes in income and earnings over time, an adjustment for changes in the cost of living is required. The Census Bureau uses the research series of the Consumer Price Index (CPI-U-RS), provided by the Bureau of Labor Statistics for 1967 through 2004, to adjust for changes in the cost of living. The indexes used to make the constant dollar conversions are shown on page 30.

¹ The Census Bureau uses the Bureau of Labor Statistics' experimental Consumer Price Index (CPI-U-RS) for 1977 through 2004. The Census Bureau derived the CPI-U-RS for years before 1977 by applying the 1977 CPI-U-RS-to-CPI-U ratio to the 1947 to 1976 CPI-U.

Note: Data users can compute the percentage changes in prices between earlier years' data and 2004 data by dividing the annual average Consumer Price Index (CPI-U-RS) for 2004 by the annual average for the earlier year(s).

For more information on the CPI-U-RS, go to <www.bls.gov/cpi/cpirsdc.htm>.

Table A-1.
Households by Total Money Income, Race, and Hispanic Origin of Householder: 1967 to 2004
(Income in 2004 CPI-U-RS adjusted dollars. Households as of March of the following year)

Race and Hispanic origin of householder and year	Number (thousands)	Percent distribution										Median income (dollars)		Mean income (dollars)	
		Total	Under \$5,000	\$5,000 to \$9,999	\$10,000 to \$14,999	\$15,000 to \$24,999	\$25,000 to \$34,999	\$35,000 to \$49,999	\$50,000 to \$74,999	\$75,000 to \$99,999	\$100,000 and over	Value	Standard error	Value	Standard error

NA Not available.

¹ Implementation of a 28,000 household sample expansion.

² Implementation of Census 2000-based population controls.

³ Full implementation of 1990 census-based sample design and metropolitan definitions, 7,000 household sample reduction, and revised editing of responses on race.

⁴ Introduction of 1990 census sample design.

⁵ Data collection method changed from paper and pencil to computer-assisted interviewing. In addition, the 1994 Annual Social and Economic Supplement (ASEC) was revised to allow for the coding of different income amounts on selected questionnaire items. Limits either increased or decreased in the following categories: earnings limits increased to \$99,999; social security limits increased to \$49,999; supplemental security income and public assistance limits increased to \$24,999; veterans' benefits limits increased to \$99,999; child support and alimony limits decreased to \$49,999.

- ⁶ Implementation of 1990 census population controls.
- ⁷ Implementation of a new CPS ASEC processing system.
- ⁸ Recording of amounts for earnings from longest job increased to \$299,999. Full implementation of 1980 census-based sample design.
- ⁹ Implementation of Hispanic population weighting controls and introduction of 1980 census-based sample design.
- ¹⁰ Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from a list of 51 possible sources of income.
- ¹¹ First year medians were derived using both Pareto and linear interpolation. Before this year, all medians were derived using linear interpolation.
- ¹² Some of these estimates were derived using Pareto interpolation and may differ from published data that were derived using linear interpolation.
- ¹³ Implementation of a new CPS ASEC processing system. Questionnaire expanded to ask 11 income questions.
- ¹⁴ Full implementation of 1970 census-based sample design.
- ¹⁵ Introduction of 1970 census sample design and population controls.
- ¹⁶ Implementation of a new CPS ASEC processing system.
- ¹⁷ Beginning with the 2003 CPS, respondents were allowed to choose one or more races. White alone refers to people who reported White and did not report any other race category. The use of this single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White **and** American Indian and Alaska Native or Asian **and** Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.
- ¹⁸ For the years 2001 and earlier, the CPS allowed respondents to report only one race group.
- ¹⁹ Black alone refers to people who reported Black and did not report any other race category.
- ²⁰ Asian alone refers to people who reported Asian and did not report any other race category.
- ²¹ Because Hispanics may be any race, data in this report for Hispanics overlap with data for racial groups. Being Hispanic was reported by 12.1 percent of White householders who reported only one race; 2.9 percent of Black householders who reported only one race; 27.7 percent of American Indian and Alaska Native householders who reported only one race; and 9.5 percent of Native Hawaiian and Other Pacific Islander householders who reported only one race. Data users should exercise caution when interpreting aggregate results for the Hispanic population and for race groups because these populations consist of many distinct groups that differ in socioeconomic characteristics, culture, and recency of immigration. Data were first collected for Hispanics in 1972.

See footnotes on next page.

- 1 Implementation of a 28,000 household sample expansion.
- 2 Implementation of Census 2000-based population controls.
- 3 Full implementation of 1990 census-based sample design and metropolitan definitions, 7,000 household sample reduction, and revised editing of responses on race.
- 4 Introduction of 1990 census sample design.
- 5 Data collection method changed from paper and pencil to computer-assisted interviewing. In addition, the 1994 ASEC was revised to allow for the coding of different income amounts on selected questionnaire items. Limits either increased or decreased in the following categories: earnings limits increased to \$999,999; social security limits increased to \$49,999; supplemental security income and public assistance limits increased to \$24,999; veterans' benefits limits increased to \$99,999; child support and alimony limits decreased to \$49,999.
- 6 Implementation of 1990 census population controls.
- 7 Implementation of a new CPS ASEC processing system.
- 8 Recording of amounts for earnings from longest job increased to \$299,999. Full implementation of 1980 census-based sample design.
- 9 Implementation of Hispanic population weighting controls and introduction of 1980 census-based sample design.
- 10 Implementation of 1980 census population controls. Questionnaire expanded to allow the recording of up to 27 possible values from a list of 51 possible sources of income.
- 11 First year medians were derived using both Pareto and linear interpolation. Before this year, all medians were derived using linear interpolation.
- 12 Some of these estimates were derived using Pareto interpolation and may differ from published data that were derived using linear interpolation.
- 13 Implementation of a new CPS ASEC processing system. Questionnaire expanded to ask 11 income questions.
- 14 Full implementation of 1970 census-based sample design.
- 15 Introduction of 1970 census sample design and population controls.
- 16 Implementation of a new CPS ASEC processing system.

APPENDIX B. ESTIMATES OF POVERTY

How Poverty Is Measured

Following the Office of Management and Budget's (OMB) Statistical Policy Directive 14, the U.S. Census Bureau uses a set of money income thresholds that vary by family size and composition to determine who is in poverty (see the matrix below).

Poverty Thresholds in 2004 by Size of Family and Number of Related Children Under 18 Years

(Dollars)

Size of family unit	Related children under 18 years								
	None	One	Two	Three	Four	Five	Six	Seven	Eight or more
One person (unrelated individual):									
Under 65 years.....	9,827								
65 years and older.....	9,060								
Two people:									
Householder under 65 years.....	12,649	13,020							
Householder 65 years and older....	11,418	12,971							
Three people.....	14,776	15,205	15,219						
Four people.....	19,484	19,803	19,157	19,223					
Five people.....	23,497	23,838	23,108	22,543	22,199				
Six people.....	27,025	27,133	26,573	26,037	25,241	24,768			
Seven people.....	31,096	31,290	30,621	30,154	29,285	28,271	27,159		
Eight people.....	34,778	35,086	34,454	33,901	33,115	32,119	31,082	30,818	
Nine people or more.....	41,836	42,039	41,480	41,010	40,240	39,179	38,220	37,983	36,520

Source: U.S. Census Bureau.

If a family's total income is less than that family's threshold, then that family and every individual in it is considered in poverty. The official poverty thresholds do not vary geographically, but they are updated annually for inflation using the Consumer Price Index (CPI-U). The official poverty definition uses money income before taxes and does not include capital gains or noncash benefits (such as public housing, Medicaid, and food stamps).

Example: Suppose Family A consists of five people: two children, their mother, father, and great-aunt. Family A's poverty threshold in 2004 was \$23,108. Suppose also that each member had the following income in 2004:

Mother	\$10,000
Father	5,000
Great-aunt	10,000
First child	0
Second child	0
Total:	\$25,000

Since their total family income, \$25,000, was greater than their threshold (\$23,108), the family would not be considered "in poverty" according to the official poverty measure.

While the thresholds in some sense represent families' needs, the official poverty measure should be interpreted as a statistical yardstick rather than as a complete description of what people and families need to live. Many of the government's aid programs use different dollar amounts as eligibility criteria.

For a history of the official poverty measure, see "The Development of the Orshansky Poverty Thresholds and Their Subsequent History as the Official U.S. Poverty Measure" by Gordon M. Fisher, available at www.census.gov/hhes/poverty/povmeas/papers/orshansky.html.

Weighted average thresholds: Some data users want a summary of the 48

thresholds to get a general sense of the "poverty line." These average thresholds provide that summary, but they are not used to compute poverty data. The averages are based on the relative number of families by size and composition.

Weighted Average Poverty Thresholds in 2004, by Size of Family

(Dollars)

One person	9,645
Two people	12,334
Three people	15,067
Four people	19,307
Five people	22,831
Six people	25,788
Seven people	29,236
Eight people	32,641
Nine people or more	39,048

NA Not available.

¹ Consistent with 2001 data through implementation of Census 2000-based population controls and a 28,000 household sample expansion.² For 1999, figures are based on Census 2000 population controls.³ For 1992, figures are based on 1990 census population controls.⁴ For 1991, figures are revised to correct for nine omitted weights from the original March 1992 CPS file.⁵ For 1988 and 1987, figures are based on new processing procedures and are also revised to reflect corrections to the files after publication of the 1988 advance report, *Money Income and Poverty Status in the United States: 1988*, P-60, No. 166.⁶ The 2003 CPS allowed respondents to choose more than one race. White alone refers to people who reported White and did not report any other race category. The use of this single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White *and* American Indian and Alaska Native or Asian *and* Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.⁷ For 2001 and earlier years, the CPS allowed respondents to report only one race group. The reference race groups for 2001 and earlier poverty data are White, non-Hispanic White, Black, and Asian and Pacific Islander.⁸ Black alone refers to people who reported Black and did not report any other race category.⁹ Asian alone refers to people who reported Asian and did not report any other race category.

Note: Prior to 1979, people in unrelated subfamilies were included in people in families. Beginning in 1979, people in unrelated subfamilies are included in all people but are excluded from people in families.

NA Not available.

¹ Consistent with 2001 data through implementation of Census 2000-based population controls and a 28,000 household sample expansion.

² For 1999, figures are based on Census 2000 population controls.

³ For 1992, figures are based on 1990 census population controls.

⁴ For 1991, figures are revised to correct for nine omitted weights from the original March 1992 CPS file.

⁵ For 1988 and 1987, figures are based on new processing procedures and are also revised to reflect corrections to the files after publication of the 1988 advance report, *Money Income and Poverty Status in the United States: 1988*, P-60, No. 166.

⁶ The 2003 CPS allowed respondents to choose more than one race. White alone refers to people who reported White and did not report any other race category. The use of this single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White *and* American Indian and Alaska Native or Asian *and* Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.

⁷ For 2001 and earlier years, the CPS allowed respondents to report only one race group. The reference race groups for 2001 and earlier poverty data are White, non-Hispanic White, Black, and Asian and Pacific Islander.

⁸ Black alone refers to people who reported Black and did not report any other race category.

⁹ Asian alone refers to people who reported Asian and did not report any other race category.

Note: Prior to 1979, people in unrelated subfamilies were included in people in families. Beginning in 1979, people in unrelated subfamilies are included in all people but are excluded from people in families.

APPENDIX C. ESTIMATES OF HEALTH INSURANCE COVERAGE

Quality of Health Insurance Coverage Estimates

National Surveys and Health Insurance Coverage. Health insurance coverage is likely to be underreported on the Current Population Survey (CPS). While underreporting affects most, if not all, surveys, underreporting of health insurance coverage on the Annual Social and Economic Supplement (ASEC) appears to be a larger problem than in other national surveys that ask about insurance. Some reasons for the disparity may include the fact that income, not health insurance, is the main focus of the ASEC questionnaire. In addition, the ASEC collects health insurance information by asking in February through April about the previous year's coverage. Asking annual retrospective questions appears to be less of a problem when collecting income data (possibly because the interview period is close to when people pay their taxes), but it may be less than ideal when asking about health insurance coverage. Compared with other national surveys, the CPS estimate of the number of people without health insurance more closely approximates the number of people who are uninsured at a specific point in time

during the year than the number of people uninsured for the entire year. For a comparison between health insurance coverage rates from the major federal surveys, see *How Many People Lack Insurance and For How Long?* (Congressional Budget Office, May 2003).

Reporting of coverage through major federal health insurance programs. The ASEC underreports Medicare and Medicaid coverage compared with enrollment and participation data from the Centers for Medicare and Medicaid Services (CMS).²⁴ Because the CPS is largely a labor force survey, interviewers receive less training on health insurance concepts. Additionally, many people may not be aware that a health insurance program covers them or their children if they have not used covered services recently. CMS data, on the other hand, represent the actual number of people who have enrolled or participated in these programs.

Changes in Medicaid coverage estimates from one year to the next

²⁴ CMS is the federal agency primarily responsible for administering the Medicare and Medicaid programs at the national level.

should be viewed with caution. Because many people who are covered by Medicaid do not report that coverage, the Census Bureau assigns coverage to those who are generally regarded as "categorically eligible" (those who received some other benefits, usually public assistance payments, that make them eligible for Medicaid). Since the number of people receiving public assistance has been dropping, the relationship between Medicaid and public assistance has changed, causing the imputation process to introduce a downward bias in the most recent Medicaid estimates.

After consulting with health insurance experts, the Census Bureau modified the definition of the population without health insurance in the supplement to the March 1998 Current Population Survey, which collected data about coverage in 1997. Previously, people with no coverage other than access to the Indian Health Service were counted as part of the insured population. Subsequently, the Census Bureau has counted these people as uninsured. The effect of this change on the overall estimates of health insurance coverage was negligible.

Table C-1.

Health Insurance Coverage by Race and Hispanic Origin: 1987 to 2004

(Numbers in thousands. People as of March of the following year)

Race and Hispanic origin and year	Total people	Covered by private or government health insurance								Not covered

NA Not available. Respondents were not asked detailed health insurance questions about direct-purchase coverage before the 1995 Current Population Survey (CPS) Annual Social and Economic Supplement (ASEC).

¹ Military health includes: CHAMPUS (Comprehensive Health and Medical Plan for Uniformed Services)/Tricare and CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs), as well as care provided by the Health and Medical Program of the Department of Veterans Affairs, as well as care provided by the Department of Veterans Affairs and the military.

² Implementation of a 28,000 household sample expansion.

³ Estimates reflect the results of follow-up verification questions and implementation of Census 2000-based population controls.

⁴ Beginning with the 1998 CPS ASEC, people with no coverage other than access to Indian Health Service are no longer considered covered by health insurance; instead, they are considered to be uninsured. The effect of this change on the overall estimates of health insurance coverage is negligible; however, the decrease in the number of people covered by Medicaid may be partially due to this change.

⁵ Health insurance questions were redesigned. Increases in estimates of employment-based and military health care coverage may be partially due to questionnaire changes. Overall coverage estimates were not affected.

⁶ Data collection method changed from paper and pencil to computer-assisted interviewing.

⁷ Implementation of 1990 census population controls.

⁸ Implementation of a new CPS ASEC processing system.

⁹ The 2003 CPS asked respondents to choose one or more races. White alone refers to people who reported White and did not report any other race category. The use of this single-race population does not imply that it is the preferred method of presenting or analyzing data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race, such as White *and* American Indian and Alaska Native or Asian *and* Black or African American, is available from Census 2000 through American FactFinder. About 2.6 percent of people reported more than one race in Census 2000.

¹⁰ The 2001 CPS and earlier years asked respondents to report only one race. The reference groups for these years are: White, White not Hispanic, Black, and Asian and Pacific Islander.

¹¹ Black alone refers to people who reported Black or African American and did not report any other race category.

¹² Asian alone refers to people who reported Asian and did not report any other race category.

NA Not available. Respondents were not asked detailed health insurance questions about direct-purchase coverage before the 1995 Current Population Survey (CPS) Annual Social and Economic Supplement (ASEC).

¹ Military health includes: CHAMPUS (Comprehensive Health and Medical Plan for Uniformed Services)/Tricare and CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs), as well as care provided by the Health and Medical Program of the Department of Veterans Affairs, as well as care provided by the Department of Veterans Affairs and the military.

² Implementation of a 28,000 household sample expansion.

³ Estimates reflect the results of follow-up verification questions and implementation of Census 2000-based population controls.

⁴ Beginning with the 1998 CPS ASEC, people with no coverage other than access to Indian Health Service are no longer considered covered by health insurance; instead, they are considered to be uninsured. The effect of this change on the overall estimates of health insurance coverage is negligible; however, the decrease in the number of people covered by Medicaid may be partially due to this change.

⁵ Health insurance questions were redesigned. Increases in estimates of employment-based and military health care coverage may be partially due to questionnaire changes. Overall coverage estimates were not affected.

⁶ Data collection method changed from paper and pencil to computer-assisted interviewing.

⁷ Implementation of 1990 census population controls.

⁸ Implementation of a new CPS ASEC processing system.
